Architectural Drafting is 2,000 hours, approximately 18 months, in length. The main objective is to educate the student to become an architectural draftsman. Each student learns the duties of an architect. Other than drafting the student is taught estimating, writing specifications, learning about various building materials, and about the building construction industry.

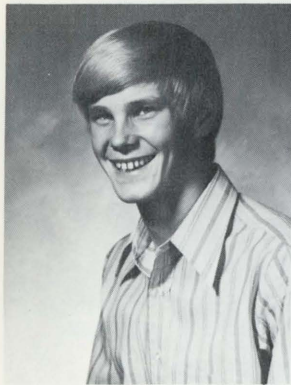

Audio Communications

The Audio Communications course is designed to teach the students the art of broadcasting news, weather, sports, conduct interviews, and handle record shows. Students receive instruction and practical work in all areas of radio announcing including camera work with closed circuit television equipment.

A new 10 watt educational stereo radio station is an added feature to the Audio Communications class this year.

Auto Body Repair is a 2,000 hour course designed to give the graduate a basic understanding of the trade, through observation, demonstration, and practical experience.

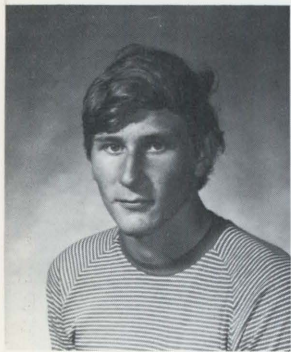

Much of the practical experience is given on cars belonging to the general public. The student starts making minor repairs on older cars and pickups and then progresses through all the steps of repairing and refinishing until he finally repairs complete wrecks.

The student also receives training in welding, leading, shrinking, straightening, sanding, painting, glasswork, frame straightening and general shop safety practices.

This is an eighteen month course divided into two nine-month sessions for a total of 2,000 hours. The objectives of the first session are to familiarize the student with the fundamentals of the auto mechanics trade. This is accomplished by studying theory in the classroom, learning manipulative skills by shop instruction and developing these skills by practice in the repairing and overhauling of engines, electrical systems, fuel systems, brakes, steering gears, power trains, exhaust emission control, automatic transmissions, and wheel alignment and balancing. In the second nine-month session, the students work full-time on actual jobs, to improve on skills and quality of work in an environment approximating that of future places of employment.

This is one of 103 FFA approved mechanic schools in the nation. In the airframe section the student will receive theory and practical experience in air-craft fabric and finishing, aircraft woodworking, sheet metal and welding, hydraulics, aircraft electricity, and electrical systems, inspection and trouble shooting, utility systems, instruments and helicopters. In the powerplant section, instruction includes superchargers, carburetion, fuel injection, magnetos, generators, starters, engine overhaul and repair, engine trouble shooting, turbo jet, turbo prop engines, propellers, propeller governors, and engine electrical systems.

The Business Education Department is planned for up to 120 students. It includes the business fields of accounting, clerical, general secretarial, legal secretarial, and medical secretarial. Each curriculum is designed to train students to become capable of duties required of them in the various fields in which they are to be employed.

The carpentry class is divided into two 9-months terms. The first year the student is taught the use of hand and machine tools, basic carpentry practices, reading and interpreting plans, framing of buildings, cabinetry, building materials and estimating.

In the second year the students build a complete home, that is sold on bids in the spring.

The first year Electronics course covers the fundamentals and basic principles, basic radio theory and servicing the superheterodyne receiver, basic electronic communications and related test instruments.

During the second year the student studies televisions and their many varied types of circuits, followed by industrial electronics, which includes such devices as voltage and current regulators, timing circuits and radio frequency remote control circuits. Integrated circuits are then studied and used to build multivibrators, counters, shift registers which leads into the study of computer circuits, such as data transfer, methods of input-output, data storage and computer languages.

The Farm Management Program is a public school program that attempts to bring all farmers the benefits of farm management instruction. Vocational agriculture instructors assist the farmers with their record books and help them prepare the books for analysis.

Farm visits and farm management meetings are a part of the vocational agriculture program. The program is designed to help each farmer identify his own problems and obtain the information needed to solve these problems.
