

## Pharm Tech Program Assessment Results FY22-FY23

With pharmacy program assessment, several impactful changes have been made. Notably, 6 out of 6 students passed their post-test, leading to an average score increase of 32%. Additionally, all students who took the pharmacy board test successfully passed. Student exit surveys have also shown a 100% satisfaction rate, with no need to increase the average score beyond 3.63. However, there has been a lower-than-average return on employer surveys. Moving forward, one key lesson is to conduct independent surveys to gather more accurate and detailed data, rather than relying solely on the college's feedback.
